

Washing machine - SLB147X

THE GRANDEUR OF STEEL, THE EFFICIENCY OF TECHNOLOGY

A new, refined washing machine made entirely from stainless steel, whose special coating makes the surface "finger-friendly" and stain-resistant. Smeg has always been sensitive to design trends without forgetting, of course, the importance of practicality. Consequently, these two concepts come together in this stunning and functional appliance. The SLB147X excels as a result of its modern and rigorous aesthetics, improved washing performance and energy efficiency.

The sizeable stainless steel drum and innovative Volume Plus technology boost washing results for large loads up to a capacity of 7kg. The new digital display means you can easily select and programme the various functions, check the time remaining and recommended load.

With an A+ energy efficiency rating, the new Smeg washing machine is very energy efficient, consuming 10% less energy than regular Class A models. Using either hot or cold water is also possible, and if water which has already been heated using solar energy is available, then the appliance will consume fully 35% less energy than a Class A equivalent.

The spin speed is variable up to a maximum of 1400rpm. 15 programmes have been created to provide the best washing care for different types of textiles and laundry, including a series of special cycles such as *Jeans*, *Shirts* and *Night*. The additional *Extra Rinse* option is very useful for people who suffer from allergies or who have sensitive skin as it removes all traces of detergent from your clothes, while the *Anti-Crease* function makes ironing a breeze.

The *self-clean* detergent drawer is another valuable function. Jets of water cover every part of the drawer, removing all traces of detergent. The large porthole, with a diameter of 30cm and 180° door opening, makes loading and unloading the machine easier.

Designed for people looking for a high-performance, user-friendly and aesthetically stunning appliance, the SLB147X washing machine fits into any interior setting and adds a touch of class.
